Chapter 4
Functions

Discrete Structures for Computing on September 14, 2017

Nguyen An Khuong, Tran Tuan Anh, Le Hong Trang
Faculty of Computer Science and Engineering
University of Technology - VNUHCM
nakhuong@hcmut.edu.vn

Contents

Course outcomes

	Course learning outcomes
L.O.1	Understanding of logic and discrete structures
	L.O.1.1 – Describe definition of propositional and predicate logic L.O.1.2 – Define basic discrete structures: set, mapping, graphs
L.O.2	Represent and model practical problems with discrete structures
	L.O.2.1 – Logically describe some problems arising in Computing L.O.2.2 – Use proving methods: direct, contrapositive, induction L.O.2.3 – Explain problem modeling using discrete structures
L.O.3	Understanding of basic probability and random variables
	L.O.3.1 – Define basic probability theory L.O.3.2 – Explain discrete random variables
L.O.4	Compute quantities of discrete structures and probabilities
	L.O.4.1 – Operate (compute/ optimize) on discrete structures L.O.4.2 – Compute probabilities of various events, conditional ones, Bayes theorem

Nguyen An Khuong, Tran Tuan Anh, Le Hong Trang

Introduction

- Each student is assigned a grade from set $\{0, 0.1, 0.2, 0.3, \ldots, 9.9, 10.0\}$ at the end of semester

Introduction

- Each student is assigned a grade from set $\{0, 0.1, 0.2, 0.3, \ldots, 9.9, 10.0\}$ at the end of semester
- Function is extremely important in mathematics and computer science

Introduction

- Each student is assigned a grade from set $\{0, 0.1, 0.2, 0.3, \ldots, 9.9, 10.0\}$ at the end of semester
- Function is extremely important in mathematics and computer science
    - linear, polynomial, exponential, logarithmic,...

Introduction

- Each student is assigned a grade from set $\{0, 0.1, 0.2, 0.3, \ldots, 9.9, 10.0\}$ at the end of semester
- Function is extremely important in mathematics and computer science
  - linear, polynomial, exponential, logarithmic,...
- Don't worry! For discrete mathematics, we need to understand functions at a basic set theoretic level

Function

Definition

Let A and B be nonempty sets. A **function** f from A to B is an assignment of exactly one element of B to each element of A.

Function

Definition

Let A and B be nonempty sets. A **function** f from A to B is an assignment of exactly one element of B to each element of A.

- $f : A \to B$

Function

Definition

Let A and B be nonempty sets. A **function** f from A to B is an assignment of exactly one element of B to each element of A.

- $f : A \to B$
- A: domain (*miền xác định*) of f

Function

Definition

Let A and B be nonempty sets. A **function** f from A to B is an assignment of exactly one element of B to each element of A.

- $f : A \to B$
- A: domain (*miền xác định*) of f
- B: codomain (*miền giá trị*) of f

Function

Definition

Let A and B be nonempty sets. A **function** f from A to B is an assignment of exactly one element of B to each element of A.

- $f : A \to B$
- A: domain (*miền xác định*) of f
- B: codomain (*miền giá trị*) of f
- For each $a \in A$, if $f(a) = b$

Function

Definition

Let A and B be nonempty sets. A **function** f from A to B is an assignment of exactly one element of B to each element of A.

- $f : A \to B$
- A: domain (*miền xác định*) of f
- B: codomain (*miền giá trị*) of f
- For each $a \in A$, if $f(a) = b$
  - b is an image (*ảnh*) of a

Function

- f maps (*ánh xạ*) A to B

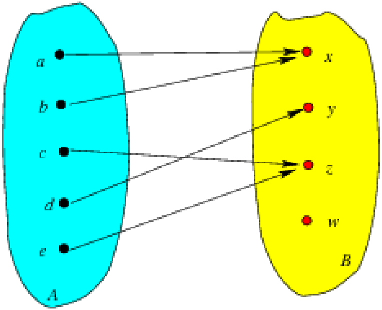
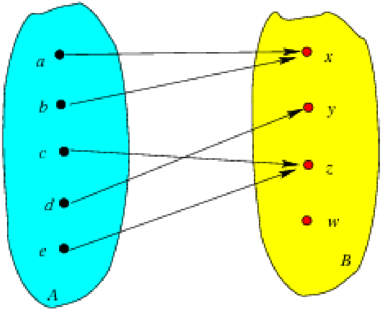
Example

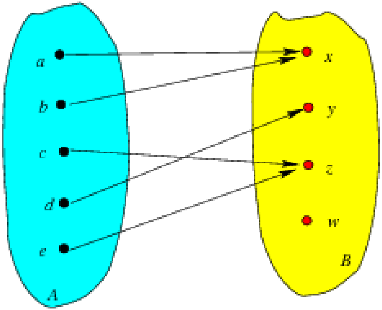


Example



Example:

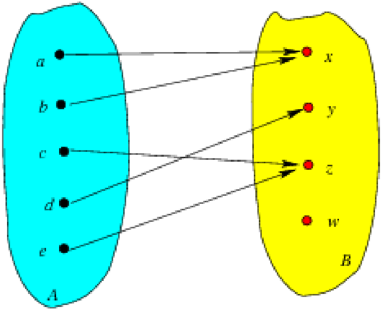
Example



Example:

- y is an image of d

Example



Example:

- y is an image of d
- c is a pre-image of z

Example

Example

What are domain, codomain, and range of the function that assigns grades to students includes: student A: 5, B: 3.5, C: 9, D: 5.2, E: 4.9?

Example

Let $f : \mathbb{Z} \to \mathbb{Z}$ assign the the square of an integer to this integer. What is $f(x)$? Domain, codomain, range of f?

Example

Example

What are domain, codomain, and range of the function that assigns grades to students includes: student A: 5, B: 3.5, C: 9, D: 5.2, E: 4.9?

Example

Let $f : \mathbb{Z} \to \mathbb{Z}$ assign the the square of an integer to this integer. What is $f(x)$? Domain, codomain, range of f?

- $f(x) = x^2$
- Domain: set of all integers
- Codomain: Set of all integers
- Range of f : $\{0, 1, 4, 9, \ldots\}$

Example

Example

What are domain, codomain, and range of the function that assigns grades to students includes: student A: 5, B: 3.5, C: 9, D: 5.2, E: 4.9?

Example

Let $f : \mathbb{Z} \to \mathbb{Z}$ assign the the square of an integer to this integer. What is $f(x)$? Domain, codomain, range of f?

- $f(x) = x^2$
- Domain: set of all integers
- Codomain: Set of all integers
- Range of f : $\{0, 1, 4, 9, \ldots\}$

Add and multiply real-valued functions

Definition

Let f_1 and f_2 be functions from A to $\mathbb{R}$. Then $f_1 + f_2$ and $f_1 f_2$ are also functions from A to $\mathbb{R}$ defined by

$$(f_1 + f_2)(x) = f_1(x) + f_2(x)$$
$$(f_1 f_2)(x) = f_1(x) f_2(x)$$

Nguyen An Khuong, Tran Tuan Anh, Le Hong Trang

Add and multiply real-valued functions

Definition

Let f_1 and f_2 be functions from A to $\mathbb{R}$. Then $f_1 + f_2$ and $f_1 f_2$ are also functions from A to $\mathbb{R}$ defined by

$$(f_1 + f_2)(x) = f_1(x) + f_2(x)$$
$$(f_1 f_2)(x) = f_1(x) f_2(x)$$

Example

Let $f_1(x) = x^2$ and $f_2(x) = x - x^2$. What are the functions $f_1 + f_2$ and $f_1 f_2$?

$$(f_1 + f_2)(x) = f_1(x) + f_2(x) = x^2 + x - x^2 = x$$
$$(f_1 f_2)(x) = f_1(x) f_2(x) = x^2(x - x^2) = x^3 - x^4$$

Image of a subset

Definition

Let $f : A \to B$ and $S \subseteq A$. The image of S:

$$f(S) = \{f(s) \mid s \in S\}$$

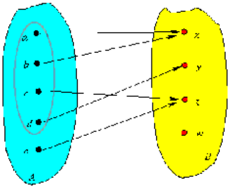


Image of a subset

Definition

Let $f : A \to B$ and $S \subseteq A$. The image of S:

$$f(S) = \{f(s) \mid s \in S\}$$

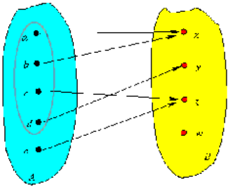

Image of a subset

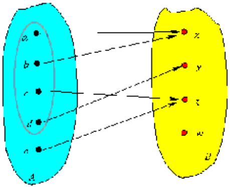
Definition

Let $f : A \to B$ and $S \subseteq A$. The image of S:

$$f(S) = \{f(s) \mid s \in S\}$$



$f(\{a, b, c, d\}) = \{x, y, z\}$

One-to-one

Definition

A function f is one-to-one or injective (*đơn ánh*) if and only if

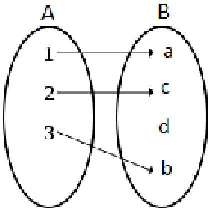
$$\forall a \forall b\, (f(a) = f(b) \rightarrow a = b)$$

One-to-one

Definition

A function f is one-to-one or injective (*đơn ánh*) if and only if

$$\forall a \forall b\ (f(a) = f(b) \rightarrow a = b)$$



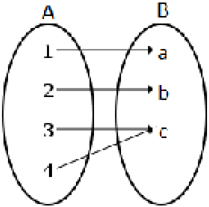
- Is $f : \mathbb{Z} \rightarrow \mathbb{Z}, f(x) = x + 1$ one-to-one?
- Is $f : \mathbb{Z} \rightarrow \mathbb{Z}, f(x) = x^2$ one-to-one?

Onto

Definition

$f : A \to B$ is onto or surjective (*toàn ánh*) if and only if

$$\forall b \in B, \exists a \in A : \ f(a) = b$$

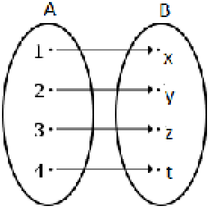


- Is $f : \mathbb{Z} \to \mathbb{Z}, f(x) = x + 1$ onto?
- Is $f : \mathbb{Z} \to \mathbb{Z}, f(x) = x^2$ onto?

One-to-one and onto (bijection)

Definition

$f : A \to B$ is bijective (one-to-one correspondence) (*song ánh*) if and only if f is injective and surjective

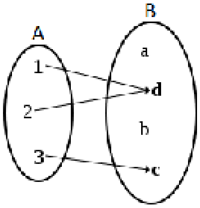


- Let f be the function from $\{a, bc, d\}$ to $\{1, 2, 3, 4\}$ with $f(a) = 4$, $f(b) = 2$, $f(c) = 1$, $f(d) = 3$. Is f a bijection?

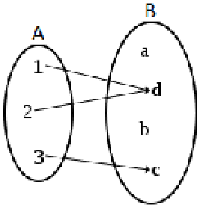
Example

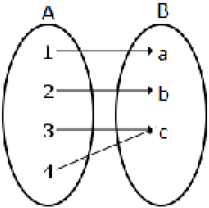
Nguyen An Khuong, Tran Tuan Anh, Le Hong Trang

Example

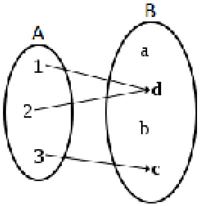


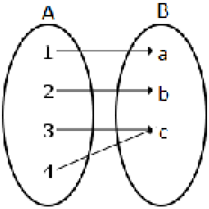
Example

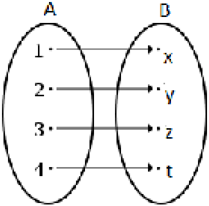




Example







Example

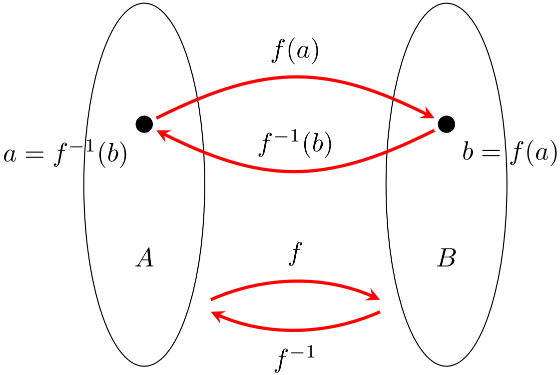
Inverse function (Hàm ngược)

Definition

Let $f : A \to B$ be a bijection then the inverse of f is the function $f^{-1} : B \to A$ defined by

$$if\ f(a) = b\ then\ f^{-1}(b) = a$$

A one-to-one correspondence is call invertible (*khả nghịch*) because we can define the inverse of this function.



Example

Example

$A = \{a, b, c\}$ and $B = \{1, 2, 3\}$ with

$$f(a) = 2 \qquad f(b) = 3 \qquad f(c) = 1$$

f is invertible and its inverse is

$$f^{-1}(1) = c \qquad f^{-1}(2) = a \qquad f^{-1}(3) = b$$

Example

Example

$A = \{a, b, c\}$ and $B = \{1, 2, 3\}$ with

$$f(a) = 2 \qquad f(b) = 3 \qquad f(c) = 1$$

f is invertible and its inverse is

$$f^{-1}(1) = c \qquad f^{-1}(2) = a \qquad f^{-1}(3) = b$$

Example

Let $f : \mathbb{R} \to \mathbb{R}$ with $f(x) = x^2$. If f invertible?

Example

Example

$$f : \mathbb{R} \to \mathbb{R}$$

$$f(x) = 2x + 1$$

Example

$$f : \mathbb{R} \to \mathbb{R}$$

$$f(x) = 2x + 1$$

$$f^{-1} : \mathbb{R} \to \mathbb{R}$$

$$f^{-1}(x) = \frac{x-1}{2}$$

Function Composition

Definition

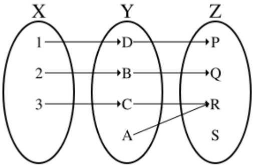
Given a pair of functions $g : A \to B$ and $f : B \to C$. Then the composition (*hợp thành*) of f and g, denoted $f \circ g$ is defined by

$$f \circ g : A \to C$$

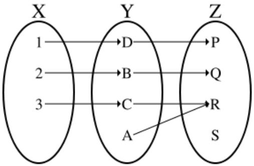
$$f \circ g(a) = f(g(a))$$

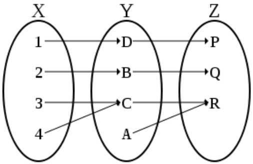
Example

Example

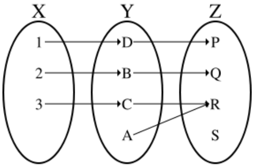


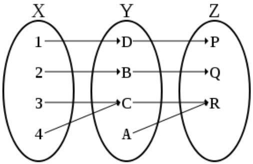
Example

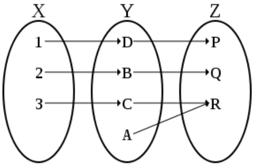




Example







Graphs of Functions

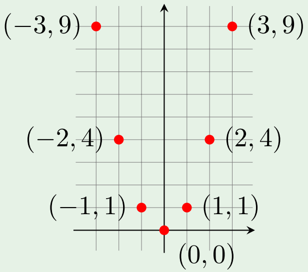
Example

The graph of $f(x) = x^2$ from $\mathbb{Z}$ to $\mathbb{Z}$.

Graphs of Functions

Example

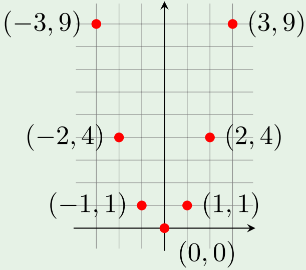
The graph of $f(x) = x^2$ from $\mathbb{Z}$ to $\mathbb{Z}$.



Graphs of Functions

Example

The graph of $f(x) = x^2$ from $\mathbb{Z}$ to $\mathbb{Z}$.



Definition

Let f be a function from the set A to the set B. The graph of the function f is the set of ordered pairs $\{(a, b) \mid a \in A \text{ and } f(a) = b\}$.

Important Functions

Definition

Floor function (*hàm sàn*) of x ($\lfloor x \rfloor$): the largest integer $\leq x$

$\lfloor \frac{1}{2} \rfloor = 0, \lfloor 3.1 \rfloor = 3, \lfloor 7 \rfloor = 7$

Important Functions

Definition

Floor function (*hàm sàn*) of x ($\lfloor x \rfloor$): the largest integer $\leq x$

$\lfloor \frac{1}{2} \rfloor = 0, \lfloor 3.1 \rfloor = 3, \lfloor 7 \rfloor = 7$

Ceiling function (*hàm trần*) of x ($\lceil x \rceil$): the smallest integer $\geq x$

$\lceil \frac{1}{2} \rceil = 1, \lceil 3.1 \rceil = 4, \lceil 7 \rceil = 7$

Important Functions

Definition

Floor function (*hàm sàn*) of x ($\lfloor x \rfloor$): the largest integer $\leq x$
$\lfloor \frac{1}{2} \rfloor = 0, \lfloor 3.1 \rfloor = 3, \lfloor 7 \rfloor = 7$
Ceiling function (*hàm trần*) of x ($\lceil x \rceil$): the smallest integer $\geq x$
$\lceil \frac{1}{2} \rceil = 1, \lceil 3.1 \rceil = 4, \lceil 7 \rceil = 7$

Bảng: Properties (n is an integer, x is a real number)

(1a)	$\lfloor x \rfloor = n$ iff $n \leq x < n+1$
(1b)	$\lceil x \rceil = n$ iff $n-1 < x \leq n$
(1c)	$\lfloor x \rfloor = n$ iff $x-1 < n \leq x$
(1d)	$\lceil x \rceil = n$ iff $x \leq n < x+1$

Important Functions

Definition

Sequences

What are the rule of these sequences (*dãy*)?

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots$

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots \qquad a_n = 2n - 1$

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots \qquad a_n = 2n - 1$

Example

$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \ldots$

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots \qquad a_n = 2n - 1$

Example

$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \ldots \qquad a_n = \frac{1}{2^{n-1}}$

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots \qquad a_n = 2n - 1$

Arithmetic sequence (*cấp số cộng*)

Example

$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \ldots \qquad a_n = \frac{1}{2^{n-1}}$

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots \qquad a_n = 2n - 1$

Arithmetic sequence (*cấp số cộng*)

Example

$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \ldots \qquad a_n = \frac{1}{2^{n-1}}$

Geometric sequence (*cấp số nhân*)

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots \qquad a_n = 2n - 1$

Arithmetic sequence (*cấp số cộng*)

Example

$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \ldots \qquad a_n = \frac{1}{2^{n-1}}$

Geometric sequence (*cấp số nhân*)

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, ...

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots \qquad a_n = 2n - 1$

Arithmetic sequence (*cấp số cộng*)

Example

$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \ldots \qquad a_n = \frac{1}{2^{n-1}}$

Geometric sequence (*cấp số nhân*)

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, ... $\qquad a_n = 6n - 1$

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \ldots \qquad a_n = 2n - 1$

Arithmetic sequence (*cấp số cộng*)

Example

$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \ldots \qquad a_n = \frac{1}{2^{n-1}}$

Geometric sequence (*cấp số nhân*)

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, … $a_n = 6n - 1$

$\{b_n\}$ 1, 7, 25, 79, 241, 727, 2185, …

Sequences

What are the rule of these sequences (*dãy*)?

Example

$1, 3, 5, 7, 9, \dots \qquad a_n = 2n - 1$

Arithmetic sequence (*cấp số cộng*)

Example

$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \dots \qquad a_n = \frac{1}{2^{n-1}}$

Geometric sequence (*cấp số nhân*)

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, ... $\qquad a_n = 6n - 1$

$\{b_n\}$ 1, 7, 25, 79, 241, 727, 2185, ... $\qquad b_n = 3^n - 2$

Recurrence Relations

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, ...

Recurrence Relations

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, ...

$a_n = a_{n-1} + 6$ for $n = 2, 3, 4, \ldots$ and $a_1 = 5$

Recurrence Relations

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, ...

$a_n = a_{n-1} + 6$ for $n = 2, 3, 4, \ldots$ and $a_1 = 5$

Recurrence relations: *công thức truy hồi*

Recurrence Relations

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, . . .

$a_n = a_{n-1} + 6$ for $n = 2, 3, 4, \ldots$ and $a_1 = 5$

Recurrence relations: *công thức truy hồi*

Definition (Fibonacci Sequence)

Initial condition: $f_0 = 0$ and $f_1 = 1$

$f_n = f_{n-1} + f_{n-2}$ for $n = 2, 3, 4, \ldots$

Recurrence Relations

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, ...
$a_n = a_{n-1} + 6$ for $n = 2, 3, 4, \ldots$ and $a_1 = 5$
Recurrence relations: *công thức truy hồi*

Definition (Fibonacci Sequence)

Initial condition: $f_0 = 0$ and $f_1 = 1$
$f_n = f_{n-1} + f_{n-2}$ for $n = 2, 3, 4, \ldots$

Example

Find the Fibonacci numbers f_2, f_3, f_4, f_5 and f_6

Recurrence Relations

Example

$\{a_n\}$ 5, 11, 17, 23, 29, 35, 41, 47, ...

$a_n = a_{n-1} + 6$ for $n = 2, 3, 4, \ldots$ and $a_1 = 5$

Recurrence relations: *công thức truy hồi*

Definition (Fibonacci Sequence)

Initial condition: $f_0 = 0$ and $f_1 = 1$

$f_n = f_{n-1} + f_{n-2}$ for $n = 2, 3, 4, \ldots$

Example

Find the Fibonacci numbers f_2, f_3, f_4, f_5 and f_6

$f_2 = f_1 + f_0 = 1 + 0 = 1$
$f_3 = f_2 + f_1 = 1 + 1 = 2$
$f_4 = f_3 + f_2 = 2 + 1 = 3$
$f_5 = f_4 + f_3 = 3 + 2 = 5$
$f_6 = f_5 + f_4 = 5 + 3 = 8$

Exercise (1)

Initial deposit: \$10,000
Interest: 11%/year, compounded annually (*lãi suất kép*)

After 30 years, how much do you have in your account?

Exercise (1)

Initial deposit: $10,000
Interest: 11%/year, compounded annually (*lãi suất kép*)

After 30 years, how much do you have in your account?

Solution:
Let P_n be the amount in the account after n years. The sequence $\{P_n\}$ satisfies the recurrence relation

$$P_n = P_{n-1} + 0.11P_{n-1} = (1.11)P_{n-1}.$$

The initial condition is $P_0 = 10,000$

Exercise (1)

Initial deposit: \$10,000
Interest: 11%/year, compounded annually (*lãi suất kép*)

After 30 years, how much do you have in your account?

Solution:
Let P_n be the amount in the account after n years. The sequence $\{P_n\}$ satisfies the recurrence relation

$$P_n = P_{n-1} + 0.11P_{n-1} = (1.11)P_{n-1}.$$

The initial condition is $P_0 = 10,000$

Step 1. Solve the recurrence relation (iteration technique)

$P_1 = (1.11)P_0$
$P_2 = (1.11)P_1 = (1.11)^2 P_0$
$P_3 = (1.11)P_2 = (1.11)^3 P_0$
$\vdots$
$P_n = (1.11)P_{n-1} = (1.11)^n P_0.$

Exercise (1)

Initial deposit: \$10,000
Interest: 11%/year, compounded annually (*lãi suất kép*)

After 30 years, how much do you have in your account?

Solution:
Let P_n be the amount in the account after n years. The sequence $\{P_n\}$ satisfies the recurrence relation

$$P_n = P_{n-1} + 0.11P_{n-1} = (1.11)P_{n-1}.$$

The initial condition is $P_0 = 10,000$

Step 1. Solve the recurrence relation (iteration technique)

$$P_1 = (1.11)P_0$$
$$P_2 = (1.11)P_1 = (1.11)^2 P_0$$
$$P_3 = (1.11)P_2 = (1.11)^3 P_0$$
$$\vdots$$
$$P_n = (1.11)P_{n-1} = (1.11)^n P_0.$$

Step 2. Calculate

$$P_{30} = (1.11)^{30} 10,000 = \$228,922.97.$$

Exercise (2)

What is the 2012th number in the sequence $\{x_n\}$: 1, 2, 2, 3, 3, 3, 4, 4, 4, 4, 5, 5, 5, 5, 5, 6,...

Exercise (2)

What is the 2012th number in the sequence $\{x_n\}$: 1, 2, 2, 3, 3, 3, 4, 4, 4, 4, 5, 5, 5, 5, 5, 6,...

Solution:

In this sequence, integer 1 appears once, the integer 2 appears twice, the integer 3 appears three times, and so on. Therefore integer n appears n times in the sequence.

We can prove that (try it!)

$$\sum_{i=1}^{n} i = 1 + 2 + 3 + \ldots + n = \frac{n(n+1)}{2}$$

and can easily calculate that

$$\sum_{i=1}^{62} i = 1953$$

so the next 63 numbers (until 2016) is 63.

Therefore, 2012th number in the sequence is 63.

Theorem

If a and r are real numbers and $r \neq 0$, then

$$\sum_{j=0}^{n} ar^j = \begin{cases} \frac{ar^{n+1}-a}{r-1} & \text{if } r \neq 1 \\ (n+1)a & \text{if } r = 1. \end{cases}$$

Theorem

If a and r are real numbers and $r \neq 0$, then

$$\sum_{j=0}^{n} ar^j = \begin{cases} \frac{ar^{n+1}-a}{r-1} & \text{if } r \neq 1 \\ (n+1)a & \text{if } r = 1. \end{cases}$$

Chứng minh.

Let $S_n = \sum_{j=0}^{n} ar^j$.

$$\begin{aligned} rS_n &= r\sum_{j=0}^{n} ar^j \\ &= \sum_{j=0}^{n} ar^{j+1} \\ &= \sum_{k=1}^{n+1} ar^k \\ &= \left(\sum_{k=0}^{n} ar^k\right) + (ar^{n+1} - a) \\ &= S_n + (ar^{n+1} - a) \end{aligned}$$

Solving for S_n shows that if $r \neq 1$, then $S_n = \frac{ar^{n+1}-a}{r-1}$

If $r = 1$, then $S_n = \sum_{j=0}^{n} a = (n+1)a$ □

Recursion

Definition (Recurrence Relation)

An equation that recursively defines a sequence.

Recursion

Definition (Recurrence Relation)

An equation that recursively defines a sequence.

Definition (Recursion (đệ quy))

The act of defining an object (usually a function) in terms of that object itself.

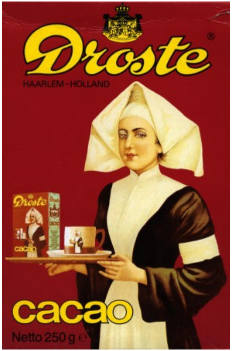
Recursion

Definition (Recurrence Relation)

An equation that recursively defines a sequence.

Definition (Recursion (đệ quy))

The act of defining an object (usually a function) in terms of that object itself.



Recursive Algorithms

Definition

An algorithm is called recursive if it solves a problem by reducing it to an instance of the same problem with smaller input.

Recursive Algorithms

Definition

An algorithm is called recursive if it solves a problem by reducing it to an instance of the same problem with smaller input.

Example

Give a recursive algorithm for computing $n!$, where n is a nonnegative integer.

Recursive Algorithms

Definition

An algorithm is called recursive if it solves a problem by reducing it to an instance of the same problem with smaller input.

Example

Give a recursive algorithm for computing $n!$, where n is a nonnegative integer.

Solution. We base on the recursive definition of $n!$:
$n! = n \cdot (n-1)!$ and $0! = 1$.

Recursive Algorithms

Definition

An algorithm is called recursive if it solves a problem by reducing it to an instance of the same problem with smaller input.

Example

Give a recursive algorithm for computing $n!$, where n is a nonnegative integer.

Solution. We base on the recursive definition of $n!$:
$n! = n \cdot (n-1)!$ and $0! = 1$.

procedure *factorial*(n: nonnegative integer)
if $n = 0$ **then return** 1
else return $n \cdot$ *factorial*(n - 1)
{output is $n!$}

Algorithms for Fibonacci Numbers

Nguyen An Khuong, Tran Tuan Anh, Le Hong Trang

Algorithms for Fibonacci Numbers

Recursive Algorithm

procedure *fibonacci*(n: nonnegative integer)
if $n = 0$ **then return** 0
else if $n = 1$ **then return** 1
else return *fibonacci*(n-1) + *fibonacci*(n-2)
{output is *fibonacci*(n)}

Algorithms for Fibonacci Numbers

Recursive Algorithm

procedure *fibonacci*(n: nonnegative integer)
if $n = 0$ **then return** 0
else if $n = 1$ **then return** 1
else return *fibonacci*(n-1) + *fibonacci*(n-2)
{output is *fibonacci*(n)}

Iterative Algorithm

procedure *iterative fibonacci*(n: nonnegative integer)
if $n = 0$ **then return** 0
else
    $x := 0$
    $y := 1$
    for $i := 1$ to $n - 1$
        $z := x + y$
        $x := y$
        $y := z$
    return y
{output is the *nth* Fibonacci number}

Tower of Hanoi

There is a tower in Hanoi that has three pegs mounted on a board together with 64 gold disks of different sizes.

Initially, these disks are placed on the first peg in order of size, with the largest on the borrom.

Tower of Hanoi

There is a tower in Hanoi that has three pegs mounted on a board together with 64 gold disks of different sizes.

Initially, these disks are placed on the first peg in order of size, with the largest on the borrom.

The rules:

1. Move one at a time from one peg to another
2. A disk is never placed on top of a smaller disk
