roperties of Relatio

Combining Relations

Representing Relations

Closures of Relations

Types of Relations

Example

What is the properties of the **divides** ($u\acute{o}c$ $s\acute{o}$) relation on the set of positive integers?

Solution:

- $\forall a \in \mathbb{Z}^+, a \mid a$: reflexive
- $1 \mid 2$, but $2 \nmid 1$: not symmetric
- $\exists a, b \in \mathbb{Z}^+, (a \mid b) \land (b \mid a) \rightarrow a = b$: antisymmetric
- $a\mid b\Rightarrow \exists k\in\mathbb{Z}^+, b=ak; b\mid c\Rightarrow \exists l\in\mathbb{Z}^+, c=bl.$ Hence, $c=a(kl)\Rightarrow a\mid c$: transitive

Closure

Nguyen An Khuong, Tran Tuan Anh, Le Hong Trang

Definition

The **closure** (bao $d\acute{o}ng$) of relation R with respect to **property** P is the relation S that

- i. contains R
- ii. has property P
- iii. is contained in any relation satisfying (i) and (ii).

S is the "smallest" relation satisfying (i) & (ii)
